

Badotherm manifold model BDTM957 is a five valve manifold that can be used for isolation, bleeding, calibration, and testing of differential pressure instruments. The BDTM957 manifold has the process connection at the bottom and the flanged instrument connection on the top. All Badotherm manifolds are standard stainless steel and optional available in exotic materials, such as Hastelloy and Monel. This valve has a non-rotatable conical tip to ensure perfect alignment for a bubble tight shut-off. Badotherm valves are manufactured within the European Union.
